

# Faux Carousel Notes

Make a Faux Carousel Note Card in almost any size or colour. This is a great way to use your Prints Pack. You can make a single layer or double it so it opens like a card.

## Supplies

6" x 6" piece of DSP (*I used a piece of Saffron from the prints pack*)

6" x 6" piece of coordinating Cardstock (*chocolate chip*)

2 pieces of cardstock to fit the largest coluzzle circle (*white & choc chip*)

Coluzzle

Slit Punch

1. Put some snail along one edge on the wrong side of your DSP. You only need it in the middle where I've marked with a pencil. The rest of the edge will be cut away later.

2. Center your DSP on top of your 6" piece of cardstock. Staple the four corners to hold everything together. Centre the coluzzle and cut a circle through both layers using the second largest track. *I tape my coluzzle down to hold it steady while I cut.*

3. Making sure you have the edge with the snail (*Don't ask me how I know this*), score at 3/8" as shown in the photo.

4. Start punching slits just past the score line as you would if you were making a scalloped edge. If you're using DSP and cardstock, you can punch through both layers at once.

Someone needs a manicure and some hand cream 😊

*Note: It's easiest to stop when you get to the score line and make two cuts leaving a tab as I did in my Spring Song sample.*

*If you choose to scallop your edge all the way around as in my Boho sample, your scallops may not line up with your first scallop so here are a couple solutions.*

- a) *make your last several scallops closer or further apart as needed to even up the space*
- b) *if you end up with a gap, it's the perfect spot for a piece of ribbon and a paper clip.*

5. Cut a white circle using the largest circle track on the coluzzle. Cut out an accent piece using the second largest (*cut first*) and largest tracks.

6. Decorate your card and insert as desired. Glue your insert and accent piece to your card as shown in the photo below.

This card can be made in a variety of sizes by changing the size of your inner circle. I can't wait to try window sheets and vellum.

I'm sure you can come up with all kinds of ideas. I'm anxious to see some of your samples.
