

Lining up Your Sweet Stems Embosslit

1. Stick a piece of paper into your sizzlit and trace around the outer edge.
2. Run it through your big shot and cut out along your traced lines to make a template.

3. Heat your stamp for 10 seconds in the microwave to soften the adhesive. Cut between the 3 flowers and reposition them by gently peeling the tip of a flower off the block and moving it over slightly.

4. Stamp the image and check if it lines up in the negative image of your template *as shown in the photos below*. You may need to reposition your stamp a few times before you're happy with it.

Below is a photo of the embossed sizzlit. It's not a perfect match but it will be an easy way of cutting out these flowers.

In the photo on the left I used a marker to ink up part of the image. I couldn't get the other two images to line up at all
